

Group

MES solutions for real-time, data-driven, manufacturing operations management.

### PERFORMANCE MANAGEMENT (OEE BATCH & DISCRETE)

Optimise performance using real-time production data to achieve on-time-in-full (OTIF) delivery and drive measurable improvement.

### MAINTENANCE MANAGEMENT

Ensure maximum availability of machinery and equipment to reduce unplanned downtime and increase production capacity.

### QUALITY CHECKS

Gain real-time insights into the causes of poor quality to improve yield, reduce production waste and meet regulatory compliance.

### STATISTICAL PROCESS CONTROL (SPC)

Understand your products process capability throughout the manufacturing plant to reduce giveaway and maximise yield.

### ENERGY MANAGEMENT

Combine energy usage data with production data to achieve your carbon reduction and sustainability goals.

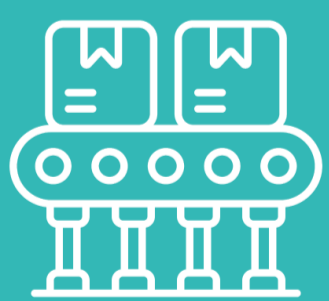

### TRACK & TRACE

Capture a digital record of material traceability and genealogy throughout the production lifecycle to protect consumer safety and brand reputation.

### INVENTORY MANAGEMENT

Maintain tight control of inventory from raw material warehousing to finished goods for increased production efficiency.

### BATCH MANAGEMENT

Manage recipes, execute batch functions, enforce SOPs, allocate assets and track materials and labour. A complete electronic audit trail to meet the most stringent EBR requirements.

### CONNECTIVITY

Seamlessly connect your MES to existing business-level systems such as ERP, PLM, WMS, LIMS, CMMS and more using low-code, no-code configuration.

#### Benefit from:

- Out of the box functionality
- Seamless integration
- Multi-language capability
- Fast time to value
- Flexible modular solutions
- Multi-site scaling
- Rapid implementation
- Future extensibility
